

Litepipe and Windvent Combined

This is a diagram of a typical combined Litepipe and Windvent unit called a VentLight. This unit delivers the combined benefit of Midtherm's Windvent system but with the added facility of natural light being ducted through its silverised aluminium core. The VentLight is a highly versatile single use product delivering natural light through vertical and/or lateral space again via the silverised aluminium core ducts with a variety of prismatic, clear or opal diffusers available.
